

## Frontend Internship Home Assignment

### Task

Implement the attached website layout (*website.png*) using CSS.

The HTML document is provided with an empty stylesheet (*styles.css*) linked to it. Write your implementation in the linked stylesheet.

Don't modify the HTML file, only if you really need to.

### Tips

- Feel free to use any resource you can find.
- For starters here are some basic tutorials:
  - <http://www.w3schools.com/css/>
  - <http://www.w3schools.com/html/>
- I recommend using a popular text editor like Sublime Text or Brackets.
- I recommend using Google Chrome browser for development
- I recommend using Chrome DevTools in the process
  - It allows you to experiment with CSS rules in the browser, which can highly speed up the implementation.
  - Tutorial: <https://developer.chrome.com/devtools>
- Don't worry if something proves to be too difficult for now, just keep trying with the rest

Good luck!
